

Is this correct? For $\sum_{n=1}^{\infty} \frac{2+(-1)^n}{1.25^n}$, I found that $\left| \frac{a_{n+1}}{a_n} \right|$ is divergent. So the series diverges by Ratio Test.

Incorrect ✓

0

True or False: If $\lim_{n \rightarrow \infty} a_n = \infty$, then a_n is eventually increasing.

0

True

0

False

0

True or False: If $\lim_{n \rightarrow \infty} |a_n| \neq 0$, then $\lim_{n \rightarrow \infty} a_n \neq 0$.

True 

0

False

0

True or False: If $\{a_n\}$ diverges and $\{b_n\}$ converges, then $\{a_n + b_n\}$ diverges.

0

True 

0

False

0

True or False: $0 \leq \ln(\ln n) \leq n$ for all $n \geq 1$.

Let $x \in \mathbb{R}$. Choose the WRONG inequality:

0

$$-1 \leq \sin x \leq 1$$

0

$$-1 \leq \cos(\pi x) \leq 1$$

0

$$-\frac{\pi}{2} < \arctan x < \frac{\pi}{2}$$

0

$$0 \leq \operatorname{arcsec} x \leq \pi/2$$
